

SUSHMITHA KATHERINE JAYARAJ

Boston, MA (open to relocate) • (857) 381-2970 • sushmithakatherine1@gmail.com • [LinkedIn](#) • [GitHub](#)

Analytics Engineer with 4+ years building dbt data models, ELT pipelines, and BI solutions across Amazon, Deloitte, and Dell. Deep hands-on experience with dbt SQL, Python, Airflow, Snowflake, and Tableau/Power BI translating business requirements into well-structured, tested, documented data models that power self-service analytics. Comfortable working across Operations, Marketing, Finance, and Product teams in fast-moving environments.

EDUCATION

Masters in Data Analytics Conc. Applied Machine Learning — Northeastern University GPA: 3.95 Sep 2024 – Jun 2026
B.E. in Information Science Engineering — Visvesvaraya Technological University GPA: 8.8/10 Aug 2016 – Aug 2020

TECHNICAL SKILLS

Analytics Engineering: dbt (Cloud + Core) · Data Modeling · Staging/Intermediate/Mart Layers · dbt Tests · dbt Documentation

Languages & Query: SQL (Advanced) · Python · NumPy · Pandas

Data Warehousing: Snowflake · Google BigQuery (familiar) · Dimensional Modeling · ELT Pipelines

Pipeline & Orchestration: Airflow · Fivetran (familiar) · Portable (familiar) · CI/CD · Git · GitHub Actions

BI Tools: Tableau (Advanced) · Power BI · DAX · Streamlit · Looker/Omni

Data Quality & Governance: dbt Tests · Schema Validation · Data Lineage · Metadata Documentation · Observability

Cloud: AWS (S3, Glue, Athena) · Azure · GCP

Domain: E-Commerce Analytics · Subscription Business · Customer Lifetime Value · Cohort Analysis

PROFESSIONAL EXPERIENCE

Data Analyst Intern | [Dell Technologies](#) | Franklin, MA Jul 2025 – Dec 2025

- Built and maintained dbt-style data models on large-scale manufacturing datasets, translating stakeholder requirements into well-structured, tested, and documented analytical datasets consumed by engineering and operations teams.
- Developed automated data quality frameworks with observability checks across multiple data sources, triaging pipeline failures and ensuring model refresh reliability across different schemas and update cadences.
- Built self-service dashboards surfacing manufacturing KPIs, enabling cross-functional teams to access and interpret data without engineering intervention

Data Analyst | [Deloitte](#) | Hyderabad, India Feb 2022 – Sep 2024

- Partnered with senior technology and business stakeholders across 3 enterprise client engagements to design and evolve data models, measurement frameworks, and analytical foundations supporting strategic decision-making at the leadership level.
- Built scalable ELT pipelines using Python and SQL processing 10M+ records per run, translating complex, multi-source enterprise datasets into curated, governed analytical products with documented metadata and data quality controls.
- Delivered self-service Tableau and Power BI dashboards for business stakeholders, reducing time-to-insight and enabling iterative, data-driven strategy refinement across engagements.

Risk Quality Analyst | [Amazon](#) | Bangalore, India Sep 2020 – Feb 2022

- Built end-to-end data pipelines on 100M+ operational records using Python and SQL, enabling data-driven decisions around resource allocation, capacity planning, and operational performance.
- Owned full analytics infrastructure: pipeline design, data quality checks, monitoring, and reporting — in a fast-moving environment with messy, ambiguous data at scale.

PROJECTS

[Freddie Mac Mortgage Risk Analytics](#) | [Snowflake](#) · [dbt](#) · [Python](#) · [Streamlit](#) · [Git](#)

- Administered a full Snowflake environment creating databases, schemas, warehouses, stages, file formats, and role-based access controls to support an end-to-end ELT pipeline on 150,000 loans and 6.2M monthly performance records.
- Designed a dimensional star schema using dbt (staging → intermediate → marts), implementing 11 automated data quality tests, enforcing primary key uniqueness and not-null constraints across all fact and dimension tables.

[Global Power Dynamics Energy Analytics](#) | [Tableau](#) · [Excel](#)

- Designed interactive Tableau dashboards analyzing global power generation trends across 5 research dimensions — nuclear energy growth, death rates per TWh by energy source, carbon reduction contributions, energy source diversity, and fuel dependency shifts over time using the Global Power Plant Database and World Nuclear Energy Generation datasets.

[Olist E-Commerce Intelligence Platform](#) | [Databricks](#) · [Delta Lake](#) · [PySpark](#) · [MLflow](#)

- Designed a Databricks medallion architecture pipeline (Bronze → Silver → Gold) ingesting 100K+ e-commerce orders across 9 Delta Lake tables with PySpark, implementing schema validation and observability controls at each layer with Unity Catalog governance.
- Diagnosed and corrected data leakage twice during ML feature engineering; trained 3 models in MLflow with full experiment lineage and registered the best-performing model (ROC-AUC 0.624) in the MLflow Model Registry.

CERTIFICATIONS

- Python Programming — HackerRank [Certificate](#) • SQL (Advanced) — HackerRank [Certificate](#)
